CLIMATE CONTROL SYSTEM**

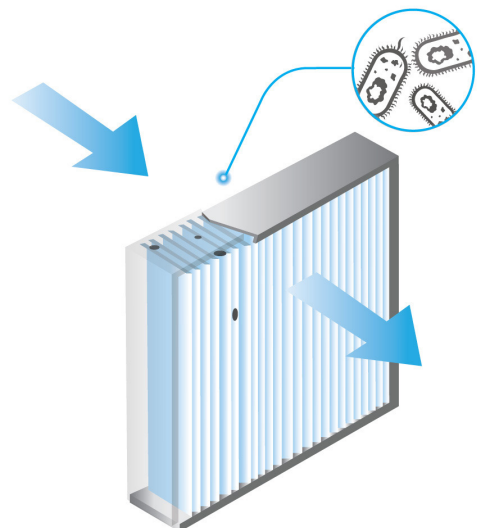

**AIR
PURIFICATION**

NATURAL PURIFICATION

Do you know there is an air purification system now available that will destroy viruses and bacteria floating through the air?

The patented DRAGON system from Enerama Environmental Technologies is the world's most efficient and powerful climate control system and can protect your (warehouse, cruise staterooms, hospital, office building, etc.) from viruses using liquid desiccant to wash the air. Dragon is unique because it kills airborne pathogens **NATURALLY**.

HIGH PRECISION

The modular and flexible design of **Dragon** allows seamless integration with chillers, boilers and with AC and HVAC systems through duct work. **Dragon** ensures a hygienic and safe environment adhering to Health Code and Regulatory compliance.

CLIMATE CONTROL SYSTEM

REMOTE MONITORING AND MANAGEMENT SYSTEM

Thanks to the specially designed electronic control system, individual sections can be controlled and managed separately. Operation reports can be received and alarms can be displayed instantly. Remote monitoring, management and maintenance procedures can be performed easily with advanced and intelligent **EMS (Equipment Monitoring System)** technology. **Mekasera** Remote Monitoring and Management System is compatible with smart tablets, smart phones, PC and Mac computers and easily accessible through web sign in.

MEKASERA

PRECISE HUMIDITY CONTROL

The **Dragon** dehumidification system provides high precision humidity control at a much lower cost than other alternative products in commercial or industrial applications. **Dragon** eliminates bacterial growth and also provides a natural, odorless, clean air environment by disinfecting the airborne disease particles without the use of chemicals and does not need any expensive filtration systems.

PATENTED TECHNOLOGY

The patented **Dragon** system is the world's most efficient and powerful climate control system that kills all airborne pathogens (bacteria and viruses) using liquid desiccant technology. This system will protect all commercial buildings, hospitals, warehouses, and hotels, etc. **Dragon** ensures a hygienic and safe environment, adhering to Health Code and Regulatory Compliance.

GENERAL FEATURES

- Consistently achieve optimum climate conditions to maximize product quality and to minimize product loss
- Unmatched energy consumption at 1.32 gallons per 1 kWh
- Consistent performance independent of most outdoor and indoor condition
- Considerable energy savings from the efficient use and transfer of latent energy
- No unwanted heat transfer during dehumidification
- Contributes dynamically to cooling or heating based on needs
- Prevent humidity driven biohazards including mold, fungi, bacteria and pests among many others
- Destroy considerable airborne pathogens during the liquid desiccant dehumidification
- Closed circuit liquid desiccant system with built in regenerative properties to eliminate running material costs
- Self diagnosis, remote support and in depth troubleshooting to streamline maintenance and to minimize downtime
